

How I finally fixed the 2 button

I didn't fix the button that would probably shave off years off my life

What I did was download a program called "Sharp Keys" and replaced the function of key 2 with F9 because I never actually use that button

At first I tried it with F8 but it came with a lot of problems like sometimes it not working, writing 2P instead of just 2 and F8 being counted as P itself sometimes when tying it in the Sharp Keys

It was pretty much a hot mess

So I chose a button next to it and called it a day
